Verena Trenkel

Ifremer Nantes et Brest

## Questions

- What is the influence of stocks and community status on the performance and dynamics of fleets?
- What is the influence of fleet dynamics on the dynamics of fish stocks and of the community?

# Linking ecology and economy

## Conceptuel model for one stock and one fleet

Contribution of fleet to stock production

S stock abundance  
E fleet effort  
C catch  
P price

Dependence of fleet on stock

—● Negative impact  
—▶ Positive impact

# French fisheries in the Bay of Biscay

## Selecting stocks

- species of both ecological and economic importance

anchovy, cuttlefishes, hake, Nephrops, monkfishes, pilchard, sea bass, sole, squids

## Defining fleets

- Economic input criteria: vessel activity radius & fishing gear

31 fleets

## Steps of an integrated assessment

- **Single component assessments**
  - Changes in fish stocks
  - Status of fishing fleets
  
- **Analysis of links between components**
  - Fleet contributions to fish landings
  - Fleet dependencies on stocks
  
- **Tests of mutual impacts of stocks and fleets**

# 1. Single component assessments

## Interpreting changes in fish stocks

### Expected impact of fisheries on stocks

- Reduced fishing impact  $N \nearrow$  AND  $(l_{bar} \cup l_{75\%}) \nearrow$
- Increased fishing impact  $N \searrow$  AND  $(l_{bar} \cup l_{75\%}) \searrow$
- No change in fishing impact in all other cases

### Expected effect of stock changes on fisheries

- Favourable if  $N \nearrow$  OR  $N \leftrightarrow \cap (l_{bar} \cup l_{75\%}) \nearrow$
- Detrimental if  $N \searrow$  OR  $N \leftrightarrow \cap (l_{bar} \cup l_{75\%}) \searrow$
- Neutral in all other cases

#### Stock indicators

$N$  abundance;  $l_{bar}$  mean length;  $l_{75\%}$  upper length quartile

## Changes in fish stocks 1992-2006

Time period	Impact of fishing	Effect on fisheries
1992-2006	<b>1 reduced</b> <b>12 no change</b>	<b>1 detrimental</b> <b>9 favourable</b> <b>3 neutral</b>
2004-2006	<b>3 reduced</b> <b>10 no change</b>	<b>4 favourable</b> <b>6 neutral</b>

# 1. Single component assessments

## Economic status of fishing fleets

### Expected effect of economic status on fleet dynamics

- Increase of fleet capacity  $P > \text{ref}\%$  AND  $R > \text{ref salary}$
- Decrease of fleet capacity  $P < \text{ref}\%$  AND  $R \ll \text{ref salary}$
- No change in fleet composition in all other cases

#### Fleet indicators derived from economic surveys

$P$  net profit rate = net profit/capital invested

$R$  net seaman salary

# Economic status of fleets 2000 - 2006

## Net profit rate

reference value 4% for mixte and offshore & 12% for coastal

— Decrease in net profit —————>

Fleet	2000	2001	2002	2003	2004	2005	2006
Trawlers - Coastal	Light Green	Orange	Yellow	Yellow	Orange	Yellow	Yellow
Trawlers - Mixed	Orange	Yellow	Yellow	Orange	Red	Orange	Red
Trawlers - Offshore	Orange	Light Green	Yellow	Red	Orange	Light Green	Yellow
Seiners - Coastal	Red	Light Blue	Orange	Orange	Light Green	Orange	Red
Dredgers - Coastal	Light Green	Light Green	Light Green	Yellow	Yellow	Orange	Orange
Netters - Coastal	Light Green	Light Green	Light Green	Yellow	Yellow	Orange	Orange
Other Passive - Coastal	Yellow	Light Blue	Light Green	Light Green	Light Green	Light Green	Orange
Netters - Mixed	Light Blue	Light Green	Light Blue	Yellow	Light Green	Light Green	Yellow
Glass eel - Coastal	Light Blue	Light Green	Light Green	Light Green	Light Green	Light Green	Yellow

% of vessels above the reference value in the considered fleet and year						
<30%	30-40	40-50	50-60	60-70	70-80%	>80%
Bad situation					Good	
situation						

# Economic status of fleets 2000 - 2006

## Net seaman salary

reference value depends of fleet

Slight increase or stability in salaries

Fleet	2000	2001	2002	2003	2004	2005	2006
Trawlers - Coastal	Orange	Yellow	Yellow	Orange	Orange	Yellow	Yellow
Trawlers - Mixed	Orange	Orange	Yellow	Light Green	Yellow	Light Green	Light Green
Trawlers - Offshore	Red	Orange	Green	Orange	Light Green	Light Green	Light Green
Seiners - Coastal	Red	Light Blue	Orange	Yellow	Light Blue	Orange	Yellow
Dredgers - Coastal	Yellow	Orange	Light Green	Yellow	Yellow	Orange	Orange
Netters - Coastal	Orange	Yellow	Light Green	Yellow	Orange	Light Green	Yellow
Other Passive - Coastal	Orange	Light Green	Red	Orange	Orange	Yellow	Yellow

Glass eel - Coastal	Yellow	Green	Orange	Yellow	Yellow	Yellow	Red

% of vessels above the reference value in the considered fleet and year						
<30%	30-40	40-50	50-60	60-70	70-80%	>80%
Bad situation					Good	
situation						

## 2. Mutual impacts of stock and fleet dynamics

### Hypotheses tests

- H1) Changes in effort E drive stock changes S No
- H2) Changes in effort E on stock S drive catch C No
- H3) Changes in stock S determine catch C No
- H4) Changes in catch C drive effort E neg. corr.

## Additional hypotheses

- Ha) Changes in catch **C drive** stock changes **S**
- Hb) TAC **limits** catch **C**

Ha) Changes in total fleet production between t-1 and t drive stock changes during same period

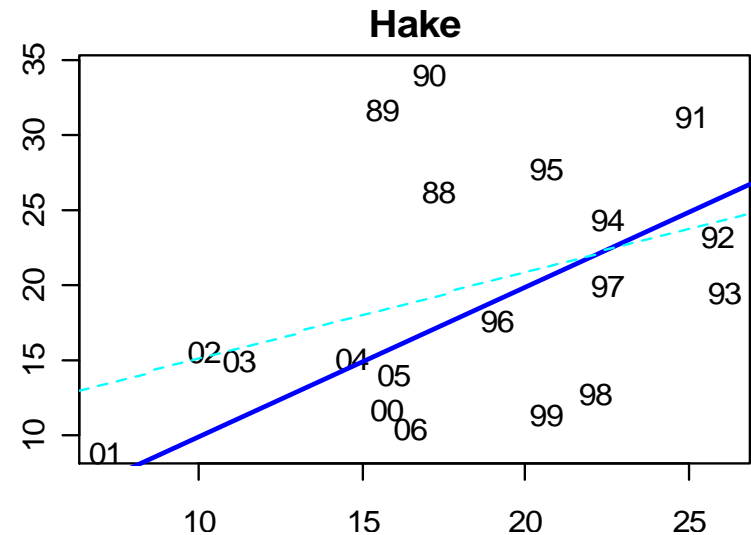

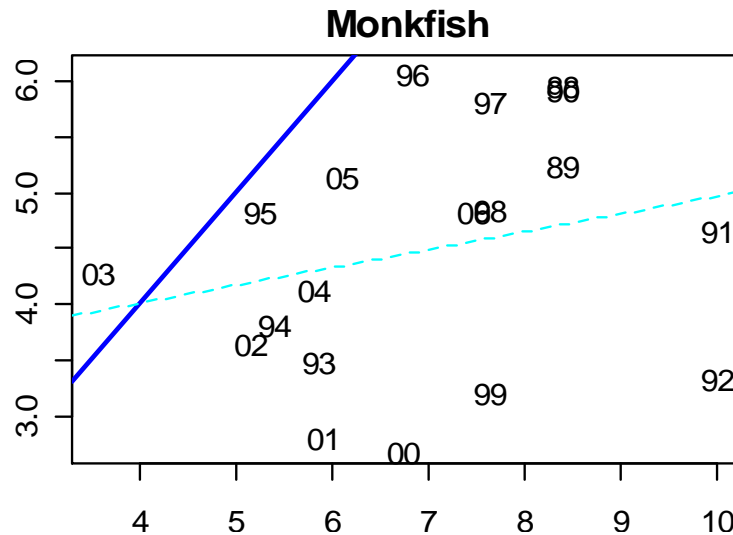

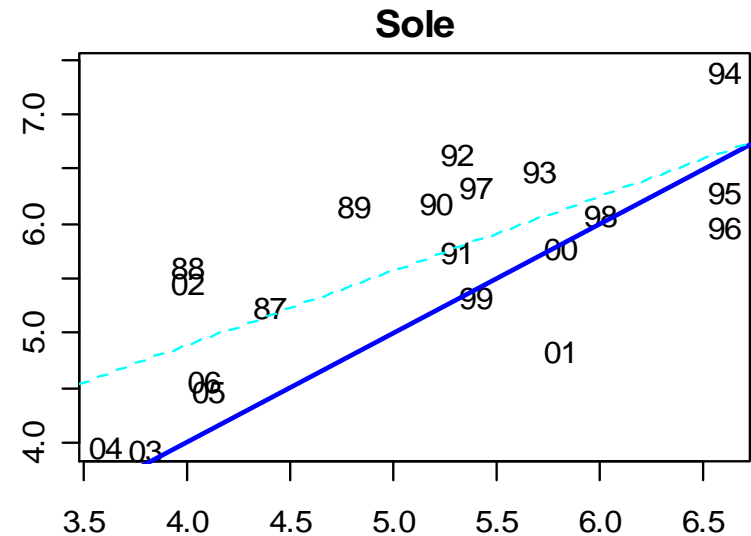

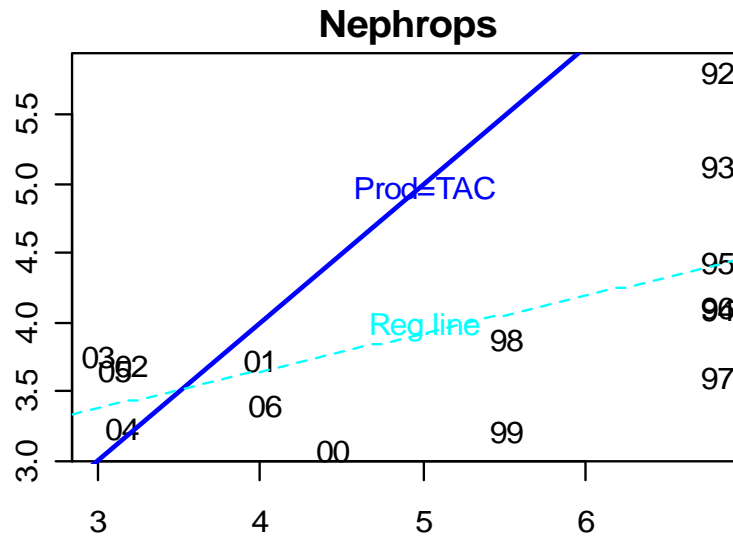

Some evidence

No species×year	Production ↘	Production ↗
Biomass ↘	10	17
Biomass ↗	17	11

➤ **Gtest: 3.031, P = 0.0817**

# Hb) TAC is related to landings C (but does not limit C!)

Landings

TAC

ifremer

## Conclusions

In the Bay of Biscay during 2000-2006

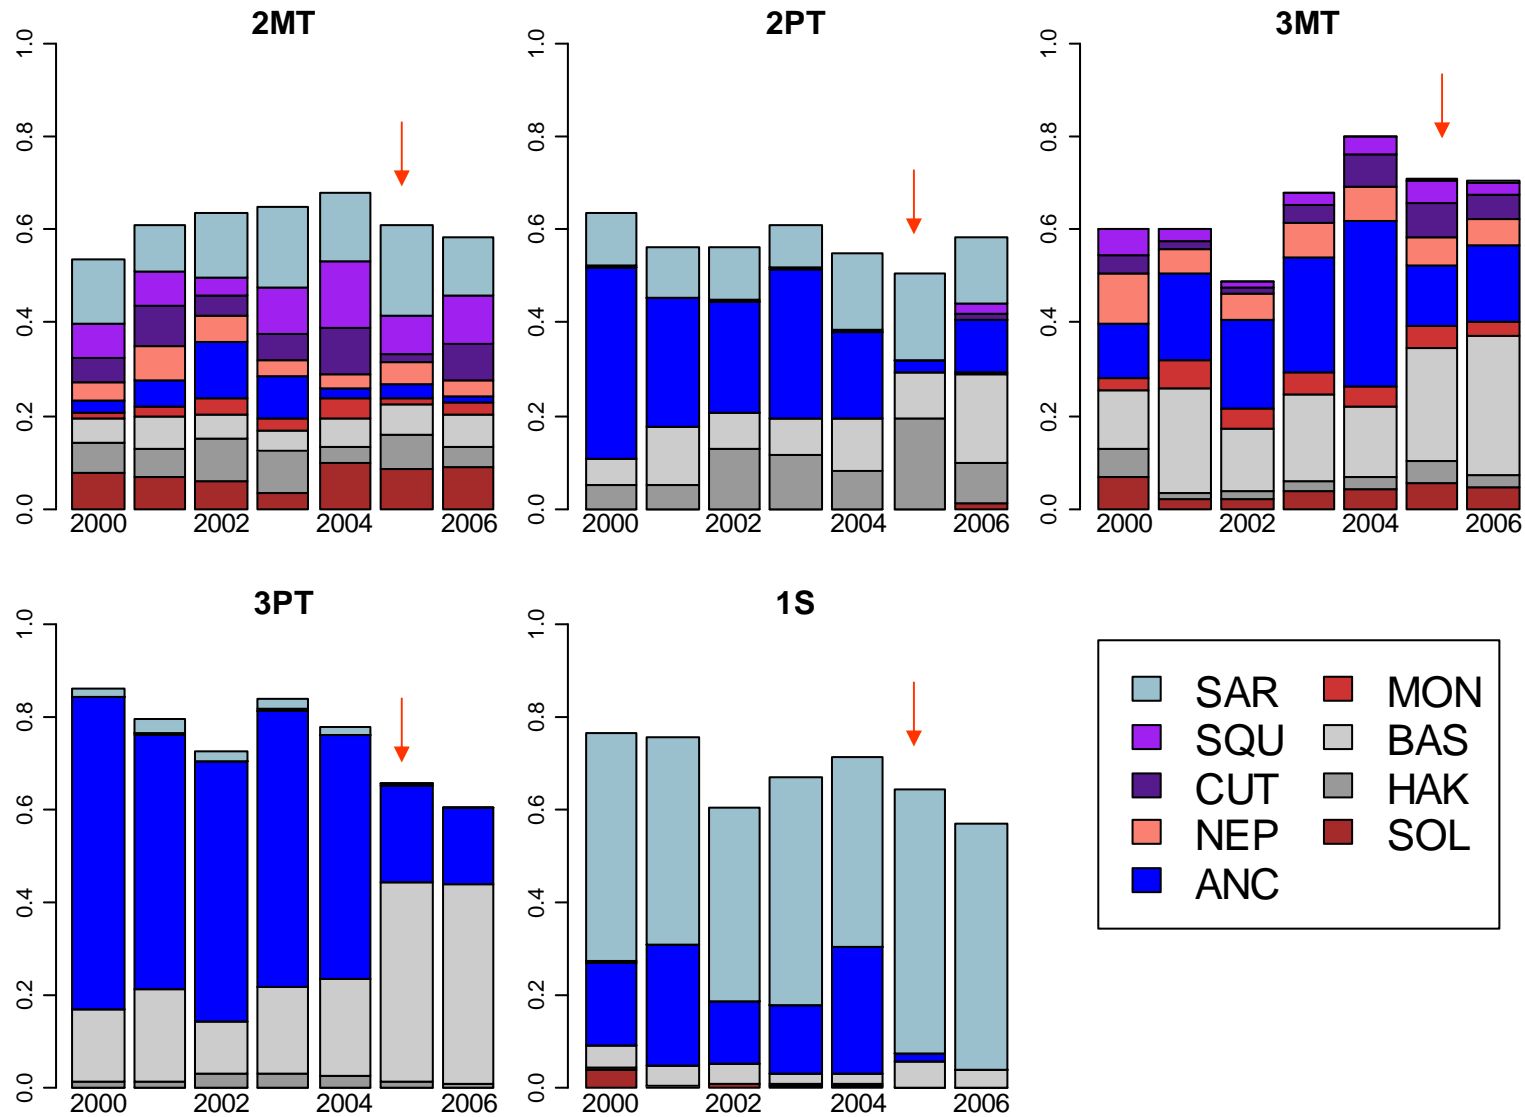

- The impact of fishing on 9 important stocks remained stable or decreased slightly, due to decreased (French) fleet size and perhaps TAC being limiting
- Stock dynamics seemed to have had little direct impact on fleet dynamics

Explanation: larger management context and shorter (within year) and longer time frames determine fleet dynamics

Example closure of anchovy fishery

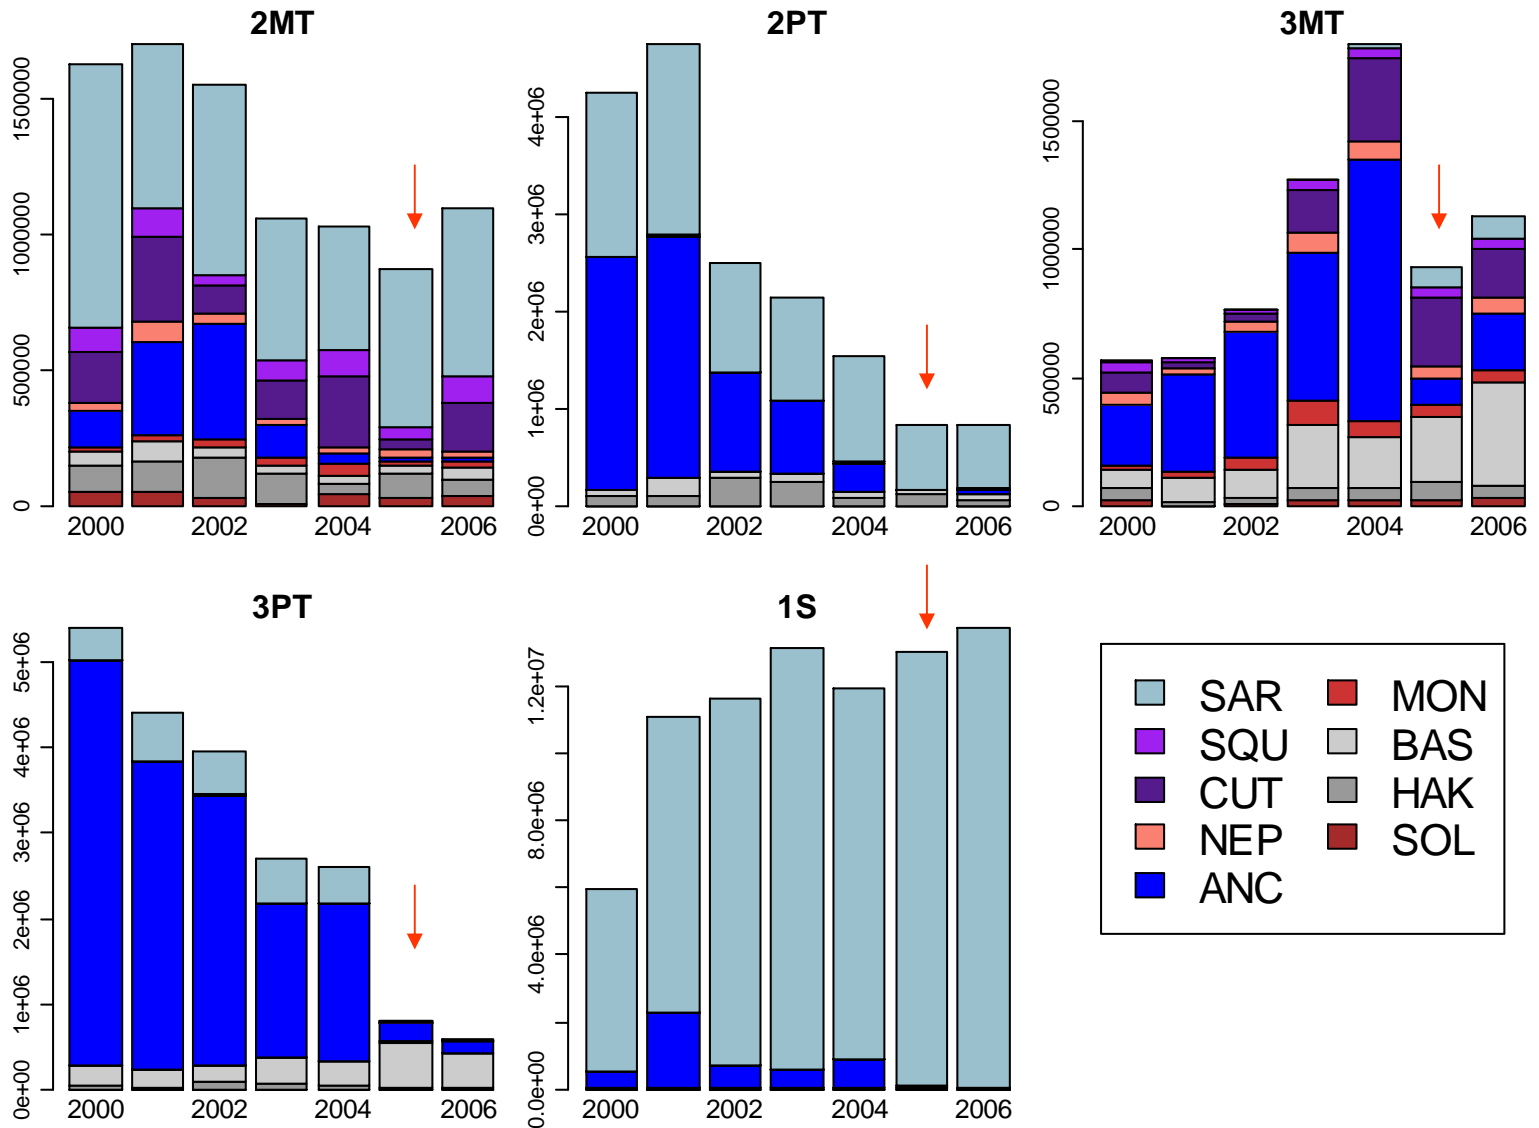

# Economic effect of anchovy closure from 2005

Proportion of revenue derived from different species by fleet

# Fleet production changes

# Fleet dynamics effect of anchovy closure

leaving Bay of Biscay

moving offshore (>12 nm)

adding bottom trawl
